Below step shows the process

Step 3th: Reset a number

Let's make an example:

The number of No.15 call buttons has been set as the wrong number "9".

More settings

F03 Cycle reporting setting.

F3-1 Reporting mode setting. In this mode, it has three options: 0, 1, 2. Noneed to make any change on this setting.

But if it is changed accidentally, then remember to resume it to be 1. the option "1" means that the screen will report -the table numbers one by one when there are multiple customers are pressing the button at the same time.

F3-2: Calling times. This is for setting the times of reporting.

For example, you want a number to be reported for 3 times. Then you should follow the below steps:

- 1: press setting key for 3 seconds, screen shows "F-01"; then press UP key for 2 times, screen shows "F-03".
- 2: Press confirm key shortly, screen shows "F3-1"; then press UP key shortly, screen shows "F3-2".
- 3: Press confirm key shortly, screen shows "1"; then press UP key for 2 times, screen shows "3".
- 4: Press confirm key shortly, screen reports "set successfully". Then press setting key to return to the standby mode.

F3-3: Calling time limit. This is about how often the repeated call will be reported.

For example, if the calling times has been set as 3, now you want it to report every 40 seconds, then follow the below steps:

- 1: press setting key for 3 seconds, screen shows "F-01"; then press UP key for 2 times, screen shows "F-03".
- 2: Press confirm key shortly, screen shows "F3-1"; then press UP key for 2 times, screen shows "F3-3".
- 3: Press confirm key shortly, screen shows "30"; then press UP key for 10 times, screen shows "40".
- 4: Press confirm key shortly, screen reports "set successfully". Then press setting key to return to the standby mode.

Special note: if this number is set to be 99 seconds, it means the screen will show the latest 3 calls at all time. The 3 calls will Not be disappeared unless you have canceled the calls.

F-04 Scene switching mode. This is about setting the certain mode of reporting.

The standard mode is reported as "Number XXXX order, number XXXX Bill, number XXXX Call..."

Note: XXXX represent numbers 0001-F999.

If the screen reports like "0010 number call", then you need to resume it as per the below steps:

- 1:press setting key for 3 seconds, screen shows "F-01"; then press UP key for 6 times, screen shows "F-07"
- 2:press confirm key shortly, then screen shows F7-1. Press the up key for one time, it shows F7-2.
- 3:press confirm key again, then press setting key to return back to standby mode.

F07-3 is about Resetting the WIFI, now the function is not available.

F-08 Testing mode.

It is used to detect if there is the interference signal nearby. In this mode, if the screen continues to sound "Ding-Dong", it means there is the interference signal here....in this case, you might need to take the screen to other place to do the setting process.

F-10 Voice selection. The standard voice of the screen reporting includes: Order, water, service, bill,call.

But you can change them to other voice like Emergency, Alarm, Nursing, First Aid, Need help,Clean ,Security, Financial, Authorization. If you want to change the standard voice to other ones, follow the below steps:

⑤

Repeat the above operation, change the voice(service, bill,pay) to other types you need.
Finally press the setting key to return back to the standby mode.

F-11 this is about connecting the screen to the kitchen transmitter.

If your screen does not have F-11, Means this version does not have this function.

Below shows the step to connect the screen to the kitchen transmitter.

- 1:press setting key for 3 seconds, screen shows "F-01"; then press down key for 1 time, screen shows "F-11"
- 2:press confirm key shortly, then press 0 on the kitchen transmitter, then press the ring bell on the kitchen transmitter.
- 3: then press setting key to return back to standby mode.
